SUMMARY

Senior Frontend Engineer with 5+ years of experience building scalable, SSR-driven web applications, specializing in Vue.js and Nuxt.js and shipping production React and Next.js applications. Delivered bidding and tender systems, freelancing marketplaces, e-learning, and healthcare platforms, including multilingual RTL interfaces, real-time features, live-streaming, and payment gateway integrations. Strong focus on performance, Core Web Vitals, accessibility, security, clean code, and scalable architecture, using AI-assisted development workflows (Claude, Cursor, Codex) to accelerate refactors and migrations, automate code reviews, and ship complex modules faster without sacrificing code quality. Author of Locale Guard, an open-source GitHub Action and npm CLI that catches translation bugs before they reach users. Its findings led to fixes merged into Open WebUI, dashy, and listmonk.

EXPERIENCE

Senior Frontend Developer | Mazaady
Saudi Arabia (Remote) | Apr 2024 - Present
Key products: Rivals (bidding & tenders) | Doworkss (freelancing marketplace) | Your Doctor (healthcare, React & Next.js)

- Migrated Doworkss from Nuxt 2 to Nuxt 4 with a feature-based architecture replacing the previous flat structure, removing redundant dependencies to reduce bundle size and maintenance cost.
- Owned the end-to-end refactor of 6+ admin panels across all company products, introducing TypeScript to codebases with almost no type coverage, restructuring shared components, and standardizing RBAC.
- Built multilingual RTL interfaces supporting 6 languages, including custom Urdu locale handling for vee-validate and Zod, and delivered real-time features: WebRTC live streaming for auctions, Pusher chat, and Firebase notifications.
- Hardened security with a server-side proxy using HTTP-only session cookies, Cloudflare Turnstile, and HTML sanitization, and integrated Tap payments with geo/IP-based currency detection.
- Improved Core Web Vitals and accessibility through image optimization, caching, and SSR tuning, and set up Sentry, CI/CD pipelines, and Lefthook pre-commit hooks.
- Built custom Claude Skills and agent configurations for module scaffolding, code review, and release workflows, automating repetitive admin work and generating unit tests with Vitest.

Senior Frontend Developer | CyberX World
Saudi Arabia (Remote) | Jan 2024 - Apr 2024
Key products: AwareX (security awareness) | Phishing simulation platform

- Built security awareness and phishing simulation platforms serving both children and corporate clients, covering training workshops, courses, and assessment delivery.
- Developed and customized admin dashboards using Vue.js/Nuxt.js with Vuetify and PrimeVue, building reusable components adopted by the wider team and integrating REST APIs.
- Delivered bilingual Arabic/English interfaces with RTL support, and conducted code reviews and refactoring to improve code quality across the codebase.

Mid Frontend Developer | VERO
Egypt (Remote) | Mar 2022 - Jan 2024
Key products: Personal Learning Coach (PLC) | Creative

- Developed Personal Learning Coach (PLC), an international SaaS learning assessment platform serving individual and institutional subscribers, building a multilingual interface supporting 11 languages including RTL.

- Led a large-scale refactor of the PLC codebase, removing dead code, restructuring shared modules, and fixing long-standing issues across the application.
- Integrated accessibility-driven features including text-to-speech playback and image-to-text extraction through backend APIs.
- Built responsive interfaces for education and scientific research platforms covering school management, student assessments, and exams, and handled frontend deployment to production servers over SSH.

Frontend Developer | Treinder
Egypt (Hybrid) | Oct 2021 - Mar 2022
Key products: Pharma In (healthcare)

- Built a healthcare platform from scratch using Vue.js and Nuxt.js, integrating REST APIs and contributing to project structure decisions.
- Created shared components and reusable helpers to reduce duplication across the codebase.

FREELANCE & PART-TIME EXPERIENCE

Frontend Developer | Jetorder
Jordan (Remote) | Sep 2022 - May 2023

- Delivered features for e-commerce and service platforms, building responsive interfaces and integrating REST APIs.

Frontend Developer | Freelance Arabia
UAE (Remote) | Apr 2022 - Sep 2022

- Built a sports facility booking platform, rebuilding the existing project structure for scalability and delivering new features.

Frontend Developer | Glyceria
Turkey (Remote) | Mar 2022 - Jun 2022

- Developed responsive applications with Vue.js and Nuxt.js, collaborating with team leads on code quality and project structure.

OPEN SOURCE & PRODUCTS

Locale Guard | TypeScript, GitHub Actions, npm
GitHub: github.com/Mohamed-Almarag/locale-guard Marketplace: github.com/marketplace/actions/locale-guard
npm: npmjs.com/package/locale-guard-cli

- Open-source GitHub Action and npm CLI that checks translation files in pull requests and git hooks for vue-i18n, Nuxt, next-intl, react-intl, i18next, and Rails. On pull requests, it reports missing keys, broken placeholders, plural-form gaps, and untranslated text in one sticky comment with inline annotations.
- Parses vue-i18n and ICU messages into an AST with their official parsers instead of regex, and fails only on the issues a pull request introduces, or reports all existing ones on every pull request or on a schedule. Runs safely on forks and is covered by 300+ tests.
- Runs in CI on production projects, and found the translation bugs fixed in the open-source contributions below, all merged by the projects' maintainers.

Smart Admin Panel | Vue 3, Vite, TypeScript
Demo: smart-admin-panel-demo.vercel.app Docs: smart-admin-panel-docs.vercel.app

- A commercial schema-driven admin template built with Vue 3, Vite, strict TypeScript, Pinia, Tailwind, and shadcn-vue, covering 40+ CRUD modules with data tables, filtering, import/export, bulk actions, and ECharts dashboards.
- Built a CLI that scaffolds modules and forms from a real API contract instead of mock data, generating types, Zod schemas, accessible forms, and translations.
- Implemented 9-language i18n with full RTL, CASL-based RBAC, token-driven theming, and hosted documentation.

OPEN-SOURCE CONTRIBUTIONS

- **open-webui/open-webui** (155k stars): restored placeholder names in 24 strings across 10 locales that showed raw placeholders instead of values. PR: github.com/open-webui/open-webui/pull/32501
- **lissy93/dashy** (26k stars): fixed 3 Hindi messages failing at runtime that the project's CI missed, and completed its Arabic translation (63% to 100%). Credited in the project's README. PR: github.com/lissy93/dashy/pull/2394
- **knadh/listmonk** (23k stars): restored placeholders in 5 Arabic messages that dropped them, so confirmations like a deleted campaign showed without its name. PR: github.com/knadh/listmonk/pull/3281

SKILLS

Frameworks & Libraries: Vue.js (2/3), Nuxt.js (2-4), React, Next.js (App Router, Server Actions, Route Handlers), Vite, Pinia, Vuex, Zustand, TanStack Query, nuqs

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, Sass

UI & Styling: Tailwind CSS, Nuxt UI, shadcn/ui, Vuetify, PrimeVue, Element Plus, Element UI, BootstrapVue, Bootstrap

Rendering & Performance: SSR, SSG, ISR, CSR, React Server Components, Core Web Vitals, Web Performance, SEO, Caching, Image Optimization

Integration: REST APIs, WebSockets (Pusher), Firebase (FCM), WebRTC, Tap Payments, i18n & RTL, Zod, vee-validate, React Hook Form

Engineering & Quality: Clean Architecture, Feature-Based Architecture, RBAC, HTTP-only Cookie Auth, Server-Side Proxy, Accessibility, Vitest, Jest, Ladle, Sentry

AI-Assisted Development: Claude, Cursor, Codex

Tools & Collaboration: Git, GitHub, GitHub Actions, GitLab, Bitbucket, CI/CD, Lefthook, Vercel, Jira, Trello, Asana, Slack, Microsoft Teams

EDUCATION

Bachelor of Industrial Education (Applied Engineering)
Sohag University, Egypt | 2018
Grade: Very Good with Honors

LANGUAGES

Arabic (Native) | English (B2)
